Touch Systems
SOLUTIONS FOR TODAY AND TOMORROW

Touch Hi-Fi PC

Looking for a PC that won't take up much space and looks great anywhere in the house? The Touch Hi-Fi PC is a mini infotainment station that pushes the envelope for multimedia PCs with its revolutionary chassis.

In addition to its futuristic dual silver-and-amber tone finish, the Touch Hi-Fi PC also sports a built-in AM/FM radio tuner, support for AGP4X graphics, 6-Channel Audio for uninterrupted enjoyment of games/entertainment, built-in modem and LAN, plus a built-in 6-in-1 card reader to view pictures, data and files in an instant, and front-access USB 2.0, IEEE1394 FireWire, Mic-In and fiber S/PDIF, so that connecting to even more digital devices has never been easier or faster.

But best of all, the Touch Hi-Fi PC can be custom-configured to your lifestyles. It's the perfect, affordable solution to build your dream Intel Pentium 4 micro system on.

Looking more like a hi-fi stereo system than a PC, Touch Hi-Fi PC's cold light panel displays mode, status (time, track information) and EQ mode (classical, jazz, pop, etc.) Use the Touch Hi-Fi PC's handy built-in AM/FM tuner to listen to the radio from your PC!

Supported Platforms

- Microsoft Windows XP Home
- Microsoft Windows XP Professional

Includes

- wireless remote controller

A tv tuner card and a selection of optical drives may also be added to your Touch Hi-Fi PC. Please consult your sales rep for a complete options listing.
