EXPLORING THE ATHLON XP "BARTON"

At 2500+ (1.83GHz), 2800+ (2.08GHz) and 3000+ (2.25GHz), the AMD Athlon™ XP "Barton" processors offer the ultimate digital media experience in an x86 platform. They feature 640K of total on-die cache for increased software performance—over 17%

faster than its competitors on many industry benchmarks—and an extraordinary computing experience. With its QuantiSpeed architecture, which features the industry's most powerful fully-pipelined x86 floating point engine, and 333MHz front-side bus, the AMD Athlon XP powers the next generation in computing platforms for a phenomenal Internet experience with smoothing streaming audio and video. It's tailor-made for Microsoft Windows XP and is also a compelling choice for previous versions of Windows. To unleash the rich innovations of Microsoft Windows XP, AMD and Microsoft worked together to optimize applications like Media Encoder 8.0 for AMD's 3DNow! Professional technology.
