Touch Media Center PCs

*the best of today's technology
at your fingertips ... with just a touch.*

*the center of
your digital world.*

expect more from your pc.

Isn't that the bottom line—*shouldn't* your home computer be able to do more for you? Shouldn't it be able to organize your MP3 library, offer home theatre-quality audio, play DVDs, provide the resources to help you research projects, let you talk to family and friends over the Internet or even catalog family photo albums? The answer is yes—especially if your PC is a Touch Media Center PC—all these things are possible. Because we believe a PC should be just as exciting as the people who use it. Built in the award-winning tradition of the Touch Systems family of personal PCs, Touch Media Center PCs enable you to experience the best of the digital world today. It's the best addition to any lifestyle for play *and* work, and here are the reasons why.

what powers your digital world?

The Microsoft Windows XP Media Center Edition operating software that powers Touch Media Center PCs delivers the best of Microsoft Windows XP Professional computing and entertainment to your home computer.

With its sleek visual design, animated transitions and easy-to-navigate menus, you can easily enjoy one unified place for entertainment—whether you're browsing the World Wide Web, videoconferencing (*webcam required*); organizing your music and video collections; watching live TV (regardless of the TV signal used); digitally recording your favourite shows, using the **Personal Video Recorder (PVR)** and the 14-day **Electronic Program Guide (EPG)**; working from home or even powering **Smart Displays** (wireless touchscreens that enable access to your home PC from different rooms in the house). All at the touch of a button.

what will your digital world look like?

The Touch Media Center PC is a multi-functional powerhouse PC that combines a popular low-profile case and Microsoft's wireless Media Center remote control with an entertainment console that sports a

Touch Media Center PCs

Touch Systems : a proven track record

Touch Systems are built from the ground up with an extensive selection of top-quality brand name components, including AMD and Intel processors, top-of-the-line ATI and nVIDIA-powered graphics plus a wide variety of leading-edge audio, storage and networking options. Whether you're looking for a value- or performance-driven Touch System, you can rest assured that the best names in the business have been sourced to deliver it.

LCD monitor shown here is not part of the Touch Media Center PC package.

Please note: the Touch Media PC shown here may not be an exact match for the Touch Media PC you are considering; other styles and packages are available. Please consult your Touch retailer for prices and availability on all current Touch Media PCs.

sleek 5.1-channel speaker system plus a wireless keyboard and mouse combo. This stylish, compact ensemble is the perfect way to seamlessly blend home entertainment and personal computing, putting the "you" in "user" interface with its ability to accommodate individual tastes, while retaining a popular look and feel that appeals to a wide audience.

you're in command with your Touch Media Center PC.

With the wireless Microsoft Media Center remote control, your favourite entertainment is within easy reach from anywhere in the room, *because you transform your living space into a theatre.* There's no more fumbling with multiple remotes. Sort, search and choose audio album files plus view thumbnails of album graphics. The **My Videos** feature enables extensive photo image slide shows with audio.

You can also watch time-delayed TV while simultaneously recording the same program with the "Time Shift" command on the **My TV** feature.

The Touch Media Center PC also doubles as a fully functional DVD player that can be used with either a computer display or conventional TV.

You can also view snapshots and still images one at a time or create automated slide shows. Add background music to slide shows to set the right mood, and adjust the volume or skip tracks during a slide show, all without missing a beat. Large, easy-to-read menus let you sort and track those precious memories quickly and efficiently.

With these innovations and more, it's easy to see how the Touch Media Center PC delivers a complete digital media management system. It's time to make both play *and* work fun. For more information, please visit the Touch Systems website at www.touch-systems.ca, Microsoft's Media Center at www.microsoft.com/windowsxp/mediacenter or speak to your nearest Touch Systems retailer.
