## A LOOK AT HYPERTHREADING

**PCs are now faster and more efficient.** Desktop systems that have the Intel® Pentium® 4 Processor with Hyper-Threading (HT) Technology break new ground by combining world-class frequency with Hyper-Threading Technology to provide an extraordinary computing experience.

Running at 3.06GHz, the newest Intel Pentium 4 CPU supports HT Technology—pioneered on Intel's advanced server processors—to help PCs work more efficiently by maximizing CPU resources and enabling a single CPU to run two separate threads of software at the same time for dramatically improved performance and greater system responsiveness when running multiple applications simultaneously. So you can multi-task like never before.

For more details, visit Intel's website at <http://www.intel.com> and discover the difference that an Intel Pentium 4-3.06GHz CPU can make inside an award-winning Touch System today.
